7.1	Colour	specify		×	
7.2	Armour type	Aramid yarn			
7.3	Outer sheath	LSZH-FR			
7.4	Fiber optic type	OM3 50/125			
7.5	Connector type	Duplex SC-LC			
8	Transmission characteristics				
8.1	Insertion Loss, maximum, dB	0.25 dB (IEC 61300-3-4)			
8.2	Return Loss, maximum, dB	30 dB (IEC 61300- 3-6)	5		
9	Mechanical characteristics				
9.1	Crush resistance	100 N/cm (IEC 60794-1-E3)			
9.2	Maximum pulling force	200 N(IEC 60794- 1-2-E1)			
10	Usage characteristics				
10.1	Operating temperature, range -	-10 to 50 °C			
10.2	Minimum static operating bending radius	10 mm			
10.3	Fire retardant	IEC 60332-3 Cat.C			

### 11.8. Fiber Optic Patch Panel

	Description	Specification	Complied (Yes/No)	If Yes Bidders Response/ Reference Page	If No Bidders Response/ Reference Page
	Fiber Optic Patch Panel				
1	Manufacture				
2	Country of Origin				
3	Country /place of Manufacture				

4	Brand Name			
5	Model Number			
6	Application			
1	1U Optical Fibre Patch Panel has been designed to support	Up to 24 Dual SC adaptors.		
7	Features			
7.1	Width	19"		
7.2	Version	SC		
7.3	positions :	front: flush, recessed		
7.4	Easy identification	numbered on the face plate.		
7.5	Cage-nuts and fibre holders	Included		
8	Construction characteristics			
8.1	Connector type	Support both Dual SC & LC		
9	Dimensional characteristics			
9.1	Height	1 U		
9.2	Width	19 in		
9.3	Depth	310 mm		
10	Usage characteristics			
10.1	Component function	Patch panel		

## 11.9. Fiber Pigtails

	Description	Specification	Complied (Yes/No)	If Yes Bidders Response/ Reference Page	If No Bidders Response/ Reference Page
	Pigtails				
1	Country of Origin				
2	Country /place of Manufacture			·	
3	Brand Name				
4	Model Number				

	Standards Performance	International ISO/IEC 11801,		
5	D: 4 11 6 11	IEC 60793210		
6	Pigtail family characteristics			
6.1	Available connectors	SC		
6.2	Suitable for use	Patch panels using splice cassettes.		
6.3	The pigtails can be stripped	In one action over a long distance of up to 1m	X	
6.4	Insertion loss	Typical value is 0.1 dB, maximum value is 0.25 dB.		
7	Optical Performance Pigtails			
	Fiber Type : Multimode	Connector : SC Insertion loss max. : 0,25 dB		
7.1		Return loss min. : > 30 dB	)	

### **Implementation Guide Lines**

Termin	Termination, Labeling, Testing of a UTP/Fiber Network Node Cabling, WAP and Network							
Equipm	Equipment Installation							
1	Installation	The Fiber and UTP Cables with						
	Guidelines	conduits and casing shall be						
		clipped to the concrete slab or						
		wall and shall not be laid on top						
		of the ceiling.						
		All network cables and						
1		accessories should reputed same						
		brand.do not quote duplicate						
		brand.						
		During the underground fiber						
		cable laying conduct the duct						
		route survey and inspect the route						
		for manhole, coiling, splicing						
		locations. Ensure there are no						
		sharp bends or slops that exceed						
		the minimum bend radius of the						
		cable.						

			T	T
		Fiber (Fusion Splicing) and UTP		
		Network nodes should be		
		terminated on patch panels.		
		The Fiber and UTP cables have		
		to be laid from the patch panel to		
		the keystones/user end.		
		The access point shall be		
		connected to the keystones.		
		Installation of Fiber and UTP		
		cables shall not be closer to		
		power cables and water lines.		
		Installation of Fiber and UTP		
		cables shall be free of Testing		
		and Report (OTDR and Fluke)		
		The Fiber and UTP cables shall		
		be tied up loosely together with	41	
		sufficient distance.		
		WAPs should be properly wall /		
		ceiling mounted.		
		All network equipment shall be		
		mounted on the rack in a proper order.		
2	Inamantiana and			
2	Inspections and	Structured cable test report		
	Tests	should be prepared for each		
		individual building floors. The		
		report should cover all cable		
		points from the rack to the end		
		user point.		
		Wireless Access Point coverage		
		and signal strength test report		
		should be prepared for each		
		individual building floors.		
		If the supplier identifies requires		
		additional equipment other than		
		the requested amount network		
'		equipment's, supplier should		
		submit a report with		
		justifications to the purchaser.		
		A drawing of the locations		
		comprising of the final access		
		points installed should be		
		submitted to the heads of the		
		respective divisions of the		
		purchaser.		
		The final network equipment		
		configuration report and backup		
		cominguiation report and backup	<u> </u>	

		settings should be submitted to the purchaser.  If the supplier should do following Works.  Testing, numbering & rearrange, patch cord replace the existing server racks & other racks  Testing, numbering of the rearrange, relocate of exiting Data & Voice Outlets.	
3	Warranty	25 years comprehensive on-site manufacturers authorized warranty, inclusive of replacement of all defective parts free of charge for the above mention all items.	

# 4. Drawings

### Scope of Work for Fiber Laying and Related Civil Works

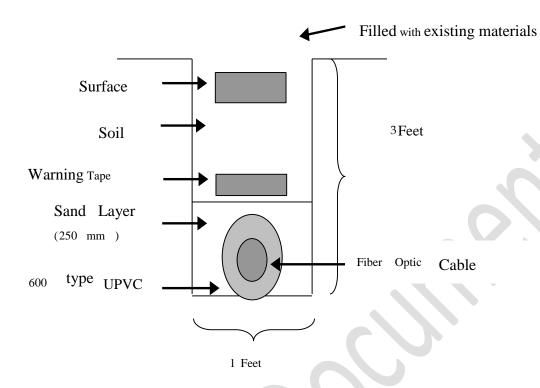

The proposed Fiber Optical Backbone should be scalable for future requirements and interoperable with other systems. This system shall have the capability of running many services such as Voice, Datatec.

The scope work shall include the following:

- All Fiber Optical Cores should be terminated with mode Pigtails using Fusion Splicing Technology
- 2. All Indoor Fiber Optical Cables should be laid in electrical conduits
- 3. All outdoor Fiber Optical Cables In between manholes, laid UPVC 4" type-600 (A spare draw wire should be installed in each cable duct).
  - Other fiber lines should be laid with the UPVC 2" type-600.
- 4. Complete backfilling and compacting the entire excavation path and all related civil works should be carried out without additional cost.
- 5. All Warning Tapes used should be 3" width, with at least a thickness of 4mil and should be printed "Fiber Optic Cable Below" (or similar) continuously.
- 6. As per site condition which needs to be agreed upon with the department a 3(W)x3(L)x3(D) (feet) manhole should be constructed with concrete(Density 4")and should be protected with a class Double SealB125/D400(BS EN 124:2015)rated access cover. Keep 2 m fiber cable in both side of the man hall
- 7. Fiber paths in should have a warning tile installed on surface every 10m with the Marking (embossing) "Fiber Cable".
- 8. All armored fiber optical cables should be grounded as per **BS 7430:2011** Code of practice for protective earthling of electrical installations industrial standards.
- All damages to residential water lines and other similar infrastructure damaged during excavation should be completely repaired with no additional cost to the department.

- 10. At all building entry points of the fiber optical backbone a 2x2(feet) hand hole should be constructed and should be protected with a class B125/D400(BS EN 124:2015) rated access cover.
- 11. Verification, qualification and certification should be done using industrial standards tool after each fiber cable installation. The report should be given in original format.
- 12. All equipment including cables should be labeled using industrial standard labeling format.
- 13. Bidder should bare the variation cost
- 14. Bidders should be check and take actual measurements by visiting the sites before quote the price.
